

SUNGUARD®

SuperNeutral™ Series

NATURAL LIGHT, NEUTRAL COLOR AND SOLAR PERFORMANCE

SUPERNEUTRAL 68 transmits the most light and has the most neutral appearance

of any SunGuard product. It can be used on the #2 surface for maximum solar control or, for enhanced energy performance, on the #3 surface of an insulating glass unit in conjunction with a tinted or coated outboard lite.

SUPERNEUTRAL 54 combines a neutral appearance with exceptional solar-energy control to strike the perfect balance between natural daylight, glare control and energy savings. In fact, SuperNeutral 54 exceeds most energy code requirements with a SHGC of 0.28 in a standard 1" insulating glass unit.

SUPERNEUTRAL ON ULTRAWHITE™ LOW-IRON GLASS

For a stunning, ultra-clear appearance combined with superior energy efficiency, SuperNeutral 68 and SuperNeutral 54 are available with Guardian's UltraWhite float glass. UltraWhite's virtual absence of color is perfect for applications — such as atriums, skylights, entranceways and curtainwalls — where neutral color and pure, sparkling clarity are desired. UltraWhite glass can be fabricated, laminated and heat-treated just like standard float glass.

SUPERNEUTRAL ON CRYSTALGRAY™

The SuperNeutral Series is also available on Guardian's new CrystalGray float glass. CrystalGray has higher light transmission than ordinary gray float glass. Combined with SuperNeutral coatings, CrystalGray offers a light, neutral appearance with less reflectance and glare and improved solar control.
