

The **Archetype Lever** is an optional add-on to the Archetype latching hardware to help those that may have difficulty gripping the standard thumbturn knob. With a 2-3/4" long body the Archetype Lever stands 3/4" proud of the lead stile. The Archetype Lever requires 60 degrees of rotation to lock and unlock, the Archetype Latch.

Proprietary Design

The Archetype Lever was designed and engineered exclusively for Fleetwood products and is not available elsewhere on the market.

The lever was shaped for minimal presentation and compliance with [ADA Accessible Design Standards](#) (Door Hardware 404.2.7).

Stainless Steel Components

The Archetype Lever is crafted from cast 316 stainless steel. Type 316 is a marine-grade stainless steel that is resistant to reactions such as corrosion and maintains its strength at elevated temperatures.

Linear Design & Smooth Operation

The Archetype Lever was carefully engineered with cast stainless steel in a linear, sleek design. The seamless integration with the [Archetype Locking System](#) provides a smooth latching motion.

Extraordinary Process

The lever is finished with a unique process called Electropolishing for a [Lifetime Warranty](#) in coastal applications. It is an electrochemical process that removes material from a metallic surface, reducing the roughness by levelling micro-peaks and valleys, while also improving the finish.

Brushed or Black Finish

The Archetype Lever is offered in a brushed texture (fine bristle sanding that leaves a non-reflective surface) or black powder coated.
